Argon $\rightarrow{ }_{18}^{40} \mathrm{Ar}$
Atomic No. $=18$
Mass No. $=40$
No. of $\mathrm{n}^{0}=40-18=22$
No. of $p^{+}=18$
If mass of $n^{0}$ in Argon made half then, number of $n^{0}=11$
If mass of electron is doubled
Here mass of electron is negligible.
Now, new mass of Argon $=11+18=29$
Now change in mass $=40-29=11$
In $\%=\frac{11}{40} \times 100$
$=\frac{110}{40}=27.5 \%$
Mass is reduced by approximately $27 \%$
12. Ans (B)

Common salt $(\mathrm{NaCl})=0.5 \mathrm{~g}$
Sodium $=40 \%$
lodine $=380 \mu \mathrm{gm}$
Mass of Na in common salt $=0.5 \times \frac{40}{100}=0.2 \mathrm{gm}$
Mass of iodine $=380 \times 10^{-6} \mathrm{gm}$
$\therefore$ Mass of chloride $=0.5-0.2-\left(380 \times 10^{-6}\right)=0.29962$
No. of chloride ions $=\frac{0.29962}{35.5} \times 6.023 \times 10^{23}=5 \times 10^{21}$

LPG $\rightarrow$ Butane + Propane
LPG $+\mathrm{O}_{2} \rightarrow \mathrm{CO}_{2}+\mathrm{H}_{2} \mathrm{O}$

$\mathrm{C}_{3} \mathrm{H}_{8}+5 \mathrm{O}_{2} \rightarrow 3 \mathrm{CO}_{2}+4 \mathrm{H}_{2} \mathrm{O}$
$\mathrm{x} \ell \quad 3 \mathrm{x} \ell$
$\mathrm{C}_{4} \mathrm{H}_{10}+\mathrm{O}_{2} \rightarrow 4 \mathrm{CO}_{2}+5 \mathrm{H}_{2} \mathrm{O}$
$\mathrm{y} \ell \quad 4 \mathrm{y} \ell$
For LPG $\rightarrow$
$x+y=5$
$x=5-y$
for $\mathrm{CO}_{2} \rightarrow$
$3 x+4 y=17$
From equation (i)
$3(5-y)+4 y=17$
$15-3 y+4 y=17$
$y=2 \rightarrow \mathrm{C}_{4} \mathrm{H}_{10}$ (butane)
$x=3 \rightarrow \mathrm{C}_{3} \mathrm{H}_{8}$ (propane)
ratio $($ butane to proane $)=2: 3$

Acid $\rightarrow 0.42$ gm. $\left(\mathrm{C}_{6} \mathrm{H}_{10} \mathrm{O}_{4}\right)$
Base $\rightarrow 0.17 \mathrm{M} \mathrm{(NaOH)}$,
moles of acid $=\frac{0.42}{72+10+64}$

$$
\begin{aligned}
& =\frac{0.42}{146} \\
& =2.87 \times 10^{-3} \mathrm{~mol} \\
& =2.87 \mathrm{~m} \mathrm{~mol}
\end{aligned}
$$

Milli moles of Base $=0.17 \times 33.8$

$$
\text { = } 5.746 \mathrm{~m} \mathrm{~mol} .
$$

$\because 2.87 \mathrm{~m} \mathrm{~mol}$ of Acid Neutralize 5.74 m mol of base.
So. $\quad 1 \mathrm{~m} \mathrm{~mol}$ of Acid Neutralise $=\frac{5.74}{2.87}=2 \mathrm{~m} \mathrm{~mol}$.
Means two protons per acid molecule are taking part in reaction.
For 1 mol of base Acid is required $=\frac{1}{2} \mathrm{~mol}$.

$$

At constant temperature.
$\mathrm{P} \propto \frac{1}{V}$
So correct graph between P vs.V

$\mathrm{Fe}^{2+}+\mathrm{MnO}_{4}^{-}+\mathrm{H}^{+} \longrightarrow \mathrm{Fe}^{3+}+\mathrm{Mn}^{2+}+\mathrm{H}_{2} \mathrm{O}$
Balanced Eq.
$5 \mathrm{Fe}^{2+}+\mathrm{MnO}_{4}^{-}+8 \mathrm{H}^{+} \longrightarrow 5 \mathrm{Fe}^{3+}+\mathrm{Mn}^{2+}+4 \mathrm{H}_{2} \mathrm{O}$
$5+1+8+5+1+4 \Rightarrow 24$

(a) $\quad 2 \stackrel{+4}{\mathrm{NO}_{2}}+\mathrm{H}_{2} \mathrm{O} \longrightarrow \mathrm{H}^{+5} \mathrm{O}_{3}+\mathrm{H}^{+3} \mathrm{NO}_{2}$

Oxidation No. of Nitrogen ( +4 ) in $\mathrm{NO}_{2}$ changed to +5 and +3 . In a disproportionation reaction an element in one oxidation state is simultaneously oxidised and reduced". So it is disproportionation reaction.
(b)

$$
3 \stackrel{0}{\mathrm{~S}}+2 \mathrm{H}_{2} \mathrm{O} \longrightarrow \stackrel{+4}{\mathrm{SO}_{2}}+2 \mathrm{H}_{2}^{-2} \mathrm{~S}
$$

O.S. of sulphur changed from 0 to +4 and -2

So it is disproportionation Reaction
(c)

O.N. of Nitrogen changed from $-3 \&+5$ to +1 .

In comproportionation reaction, two different oxidation state of an element in reactant state is simultaneously oxidised and reduced to a single oxidation state in product.
So it is comproportionation Reaction.
(d) $\quad 3 \stackrel{0}{\mathrm{Cl}}_{2}+6 \mathrm{OH}^{-} \longrightarrow 5 \mathrm{Cl}^{-1}+\stackrel{+5}{\mathrm{ClO}_{3}^{-}}+3 \mathrm{H}_{2} \mathrm{O}$
O.N. of Cl changed from 0 to $-1 \&+5$

So it is disproporationation Reaction.

$\frac{v_{2}-v_{1}}{v_{3}-v_{2}}=\frac{u_{2}+u_{3}-u_{1}-u_{2}}{u_{3}+u_{4}-u_{2}-u_{3}}=\frac{u_{3}-u_{1}}{u_{4}-u_{2}}=\frac{a\left(\Delta t_{1}+\Delta t_{2}\right)}{a\left(\Delta t_{2}+\Delta t_{3}\right)}$

$\mathrm{t}=\frac{\mathrm{d}}{\mathrm{v}_{\mathrm{mr}} \sin \theta}$
If $\sin \theta=1$ them $t$ will be minimum and for $Q$., $\theta=90^{\circ}$
so $Q$ will reach in minimum time towards east of $x$.

$-f\left(\frac{H}{2}\right)+m\left(H+\frac{H}{2}\right) g=0-0$
$m\left(\frac{3 H}{2}\right) g=\frac{f H}{2}$
$\mathrm{f}=3 \mathrm{mg}$
24. (B)

Potential difference across unit length $(x)=\frac{10}{L}$
In balanced condition no current will flow through galvanometer (G) so there will not be any effect of resistance $r$.
$E=x \ell=\frac{10}{L} \ell \Rightarrow \ell=\frac{E \times L}{10}$
25. (D)

$\mu_{1} \sin \mathrm{i}=\mu_{2} \sin \mathrm{r}$
$\frac{4}{3} \sin i=\sin r$
$\frac{4}{3} i=r \quad\left[\because \sin i=i=\tan i=\frac{x}{f} \& \sin r=r=\tan r=\frac{x}{v}\right]$
$\frac{4}{3} \frac{x}{f}=\frac{x}{v}$
$v=\frac{3}{4} f=0.75 f$

Efficiency of heating element is $50 \%$
So power $=210 \mathrm{~J} / \mathrm{S}$
That means in 1 sec supplied heat is 210 J
So in 60 sec in supplied heat is $=210 \times 60 \mathrm{~J}$
Now $\quad Q=m S \Delta t$

$$
\begin{aligned}
& 210 \times 60=m \times 4.2 \times 10^{3} \times 5 \\
& m=\frac{210 \times 60}{4.2 \times 10^{3} \times 5}=\frac{210 \times 60}{21 \times 10^{3}}=\frac{600}{1000}=0.6 \mathrm{~kg} / \mathrm{min}
\end{aligned}
$$

Now

$$
\rho=\frac{\mathrm{m}}{\mathrm{~V}}
$$

So

$$
\mathrm{V}=\frac{\mathrm{m}}{\rho}=\frac{0.6}{10^{3}} \times 10^{3} \frac{\mathrm{~L}}{\mathrm{~min}}=0.6 \frac{\mathrm{~L}}{\mathrm{~min}}
$$

Total resistance in || combination $=\frac{r}{N}$ (Assuming each resistance is of value $r$ )
Total resistance in series combination $=r \mathrm{~N}$
$\therefore \quad$ Power displacement in $\|=\frac{\mathrm{E}^{2}}{\mathrm{r} / \mathrm{N}}$

For point $\mathrm{A}_{1} \mathrm{~A}_{2}$
$u=-18^{\prime \prime}$ and $f=-12^{\prime \prime}$
so from mirror formula $\frac{1}{f}=\frac{1}{v_{1}}+\frac{1}{u}$
$\frac{1}{v_{1}}=\frac{1}{f}-\frac{1}{u}=\frac{-1}{12}-\left(-\frac{1}{18}\right)$
$=-\frac{1}{12}+\frac{1}{18}=\frac{-3+2}{36}$
$v_{1}=-36^{\prime \prime}$
Now for point $B_{1} B_{2}$
$\mathrm{u}=-30^{\prime \prime}$ and $\mathrm{f}=-12^{\prime \prime}$
So from mirror formula

$\frac{1}{v_{2}}=\frac{1}{f}-\frac{1}{u}$
$=\frac{-1}{12}-\left(-\frac{1}{30}\right)=\frac{-30+12}{360}$
